

Wastewater tour Essay

What I learned is that waste smaller than 1 inch gets shredded and that waste bigger than 1 inch goes to the dump. The new building doesn't need as much power as the old one. In fresh water they used a drill to dig 300 feet down. Fish stay alive by giving them more fresh. So the sewage doesn't you touch things your not supposed to see.

Thank you by Rory Duncan

Wastewater Tour Essay Oct. 20, 2011.

What I learned on the Wastewater management is that whenever we flush our toilets or wash our hands all that water goes through the pipes to the site. After that it goes to a screener with 1 millimeter long holes. Anything smaller than that hole goes to a large concrete tank. All the water in that tank is very clean and will go to the river. All the stuff larger than the 1 millimeter holes will be put into bags and sent to the landfill. For the equipment that needs to be dry and warm was stored in a trailer. I think this field trip was AWESOME!!!

What I learned on the Wastewater Management tour was that the cylinders that go into the ground are 300 feet deep. I also learned that its better to have two of each things the one. I learned the sewage gets gone through more then once. My favorite thing we got to do is go inside the head tank. I also learned that the old screening plant is a lot smaller then the new sewage plant.

Thank you for giving us a tour of the new sewage plant, I had a lot of fun!

Wastewater Tour Essay

Oct 20/11

What I learned on the Wastewater Management tour was that when we got to go through the head tank and got to see the manhole with the tube around it.

To me the scariest part was when I had to go down the ladder I had so much fun.

I wish we could come back.

Waste Water Tour Essay

Oct. 20, 2011

What I learned at the wastewater site was if there is 10 times more people living in Dawson the site would not have to do anything, it would still be fine. I also learned that there is a 30 feet long pipe in the ground used for waste. I enjoyed going down the ladder, and going into the head tank. I also enjoyed seeing the screening plant. Thank you for letting us come and see the waste water site.

Wastewater Tour Essay

Oct, 20, 2011

What I learned on the Wastewater Management tour was I learned how a wastewater place looks like and works like. I loved climbing in the head tank. I did not know that the screener was round. I never knew that you needed a 95m or 300ft deep hole. It was amazing that you had to drill that deep and found gold. ~~from going to workers~~

Wastewater Tour Essay

Oct. 20, 2011

What I learned on the Wastewater Management site tour was that our waste goes in a cleaner and all our dirty stuff goes to the land fill. It's tragic that I didn't know this. I enjoyed climbing down the Ladder into the head tank. I also liked going into the little door to check what was inside was the sewage tube. I really liked going to see the cleaner! The Wastewater treatment plant is good because it will keep all our waste out of the river.

What I learned on the Wastewater Management tour was that I got to go into the Head Tanks. I like to be the first one in RSS to go in the Wastewater Treatment Plant. I love the Screening plant. I like to put on the working hard hats. I had a lot of fun with you. I hope you have a great flight back.

What I learned on the Waste Water Management tour was that those pools were wreally long. That was cool. I enjoyed when we went to the head tank. We went where the screening plant was too. It was cool when we had to wear the hard hats and yests. I liked it because we checked out stuff. I enjoyed walking with you.

hard hat

Wastewater Tour Essay

What I learned on the Wastewater Management tour was that the pipe they put into the ground was 300 feet long. I learned that the tall things we went into were called head tanks. I also liked it when we got to go into the Extraction Line. Also The waste going into the river with the new plant will be cleaner. I'm so glad that you chose our class to go on the tour. Thank you.

Wastewater Tour Essay

Oct, 20, 2011

Our class went on a tour of the new wastewater management site. We learned many things, such as, I learned about head tanks, Screening plants and a lot of other things.

I learned that it should take about 6 months to finish. The funniest part of the tour was wearing the safety jackets and the hard hat. I learned there has to be a lot of people to finish the sewage plant. I learned that something as small as a millimetre can go into the Yukon River.

😊😊😊😊😊 I really enjoyed visiting the sewage plant with my class and would like to visit again.

Waste Water Tour Essay

I learned that very little pieces of poop get feed to the fishys. I learned a brick like thing is called a head tank. I learned that they drilled a big pipe in the ground. I learned that I almost missed lunch. I had lots of fun on the tour I hope I don't forget anything.
